

Corba Static Review Task

1-Static Review on offers card user story:

in the user story title user want to explore offers in the offers list page so that he can order from

There is some ambiguities in the user story that:

1.1-he want to can order from offers but there is no line in Acceptance criteria indicates that where the user can make the order, if there is an order now button at the card offer or add to cart or will found it at any other page or what is the next action to can order the chosen offer.

1.2- it does not indicate:

- the desired card size.
- Or maximum cards on the page or if there is a scroll bar or other offers pages.
- As I offer page it describes that there is will be photo for product and name of offer but omitted mentioning that how much the discount will Added or not.

2-Static review on Design:

2.1-Sponsored Cards in the top of the page, the first card has order button but the next one has Add to cart button.

2.2-As the first Ambiguity, there is some cards has Add to Cart button and others has View button (these cards for non orderable or closed place).

(I think as they in the same page they Should do the Same functionality and have the Same Names).

2.3-there are some pictures do not represent a product or unclear to customer.

(There is a photo represents cosmetics or makeup products more than food product but the app displays food offers and other photo does not clear or cannot know which type of food it is).

- As the user story Acceptance criteria in the task the card should have no of likes comments or shares and message shown to user if there are many people share the offer, the user should view message "there are many foodies posted about it" and the foodies who tagged the offer profile pictures, but no of likes only shown.
- Also, as this criteria User can click "See all" to share the posts about the offer, but there is no see all buttons on the card.

My Notice to enhance the app:

The Search need more enhancement to be easy to use
